

Introducing CDT Audio Dodge Ram UpStage UpGrade Sound System

Center of dash Hybrid 2" wide range mid-tweeter Pod
(Optional flush mounting).

Dash upgrade 2" Hybrid wide range mid-tweeter

Simple, easy, amazing!

For the first time ever, Dodge Ram owners can enjoy a true seamless sound stage directly in front of them, up above the dash. A stereo image and a soundstage in their vehicle that is just as deep, wide, and up right in front of driver and passenger. As stable as they are accustomed to at a live concert or from serious high-end home audio speakers.

The impact of the CDT Audio UpStage system is immediately obvious – the voices and instruments seem to magically take shape in a seamless sound stage directly ahead over the dash. The result is to create a listening experience that is much more like the experience of attending the live event – the musicians and sound sources seem to be arrayed in front of you as if you were sitting at the live concert first row.

You will experience a more overall detailed sound and staging up high above the dash, more open and clear vocals, snappier and tighter mid-bass response and more. You wire the directly to your left and right front speaker channels. The system ships with crossovers and volume control so you can gradually raise the sound stage and make a perfect blend with your existing sound system.

Hybrid Pod is available in vehicle matching custom colors
